# PROJECT DESIGN PHASE-I - SOLUTION FIT TEMPLATE

Team ID	PNT2022TMID22755
Project Name	Deep Learning Fundus Image Analysis for Early Detection of Diabetic Retinopathy

Define CS, fit into CC.

Explore AS

### 1.CUSTOMER SEGMENT(S)

CS

24 000

On the basic type, fast and robust one to extract exudates in colour eye fundus image which is based on mathematical morphology where Blood vessels extraction is carried out which is followed by extraction of the hard exudates and optic disc and finally detection of the optic disc which is used for distinguishing it from exudates.

### **6. CUSTOMER CONSTRAINTS**

CC

As there are a number of image taken needs to undergoes pre-processing and augmentation, some features of images may be missed out, so Such techniques should be used it not be preserved.

Multiple images should be taken for every patient which gives the possibility of classifying the images.

### 5. AVAILABLE SOLUTIONS

AS

Brought up to automate the detection process by using machine learning and deep learning. A lot of pre-processing And augmentation was done to standardize the data in desired format and remove unwanted noises.

# Focus on J&P, tap into BE, understand RC

#### 2.JOBS-T0-BE-DONE/ PROBLEM

J&P

It is easy to observe the issues in eye and it is easy way to assist the peoples easily to identify the diabetic region and helps to prevent from the danger. Detection and recognition of disease using deep learning are very efficient in providing information about eye at its earliest.

# 9. PROBLEM ROOT CAUSE

RC

The abnormal blood vessels associated with diabetic retinopathy stimulate the of the tiny blood vessels that nourish the retina, cutting off its blood supply.

### **7.BEHAVIOUR**

BE

In general, we may not able to identify the number of cases on area of the eye. It can be able to respond quickly It is easy growth of scare issues blood can lead to blood to use It is able to provide precise decision based on the disease analysis requirement of internet speed.

# Identify strong TR & EM.

# 3.TRIGGERS

What triggers customers to act? i.e seeing more efficient solution in the news.

# **4.EMOTIONS: BEFORE/AFTER**

How do customers feel when they face a problem or a job and afterwards? i.e lost, insecure > confident, in control use it in your communication strategy & design.

## 10. YOUR SOLUTION

SL

neighbour installing solar panels, reading a The proposed method is a fast and robust one to extract exudates in colour eye fundus image which is based on mathematical morphology where Blood vessels extraction is carried out which is followed by extraction of the hard exudates and optic disc and finally detection of the optic disc which is used for distinguishing it from exudates.

## 8. CHANNELS OF BEHAVIOUR

СН

## 8.1 ONLINE

What kind of actions do customers take online? Extract online channels from #7

## 8.2 OFFLINE

What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
